PROGRAMME 9: Evaluating JavaScript Event Handling for every click of a button to change the background color of a HTML page.

Event.html

```
<html>
        <head>
            <title>
                How to change the background color
                after clicking the button ?
            </title>
        </head>

        <body style = "text-align:center;">

            <h1 style = "color:green;" >
                JAVASCRIPT EVENT HANDLING
            </h1>

            <p id = "GFG_UP" style =
                "font-size: 16px; font-weight: bold;">
            </p>

            <button onclick = "gfg_Run()">
                Click here
            </button>

            <p id = "GFG_DOWN" style =
                "color:green; font-size: 20px; font-weight: bold;">
            </p>

            <script>
                var el_up = document.getElementById("GFG_UP");
                var el_down = document.getElementById("GFG_DOWN");
                var str = "Click on button to change the background color";

                el_up.innerHTML = str;

                function changeColor(color) {
                    document.body.style.background = color;
                }
```

```
        function gfg_Run() {
            changeColor('yellow');
            el_down.innerHTML = "Background Color changed";
        }
    </script>
</body>
</html>
```
